

GRACE water storage, downscaled to 0.1°

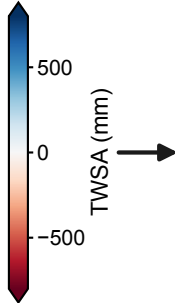

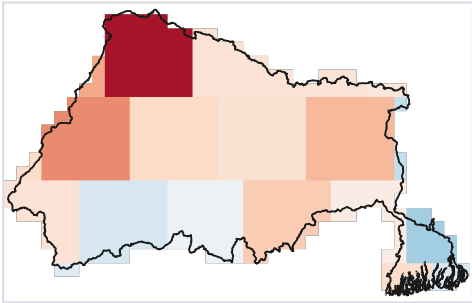

Ganges basin · 2000–2025 · monthly and daily

19 GRACE mascons → 9,538 cells, every mascon mean reproduced exactly, with per-pixel uncertainty published.

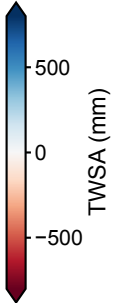

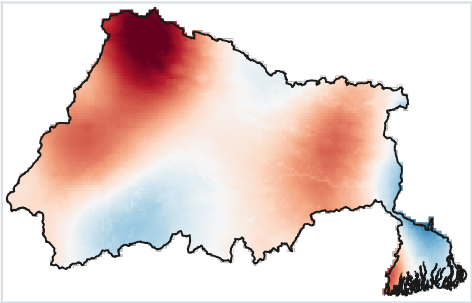

Maps: June 2016, a GRACE-observed month

What GRACE sees 19 mascons, 3°

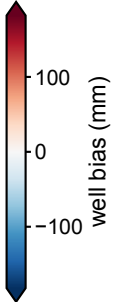

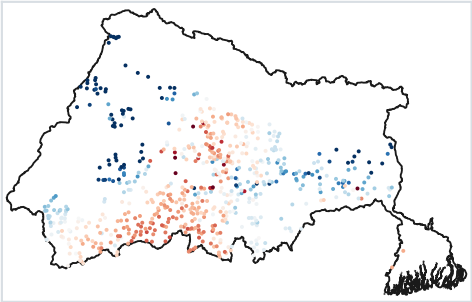

What we produce 9,538 cells, 0.1°

How uncertain per-pixel σ

Checked against wells 656 wells

Mascon-scale agreement is imposed by mass conservation and is therefore not evidence of skill; every number above is held out. Fine structure is inferred from ERA5-Land covariates, not observed. Red is water lost, blue is water gained.
